10AM - 7PM

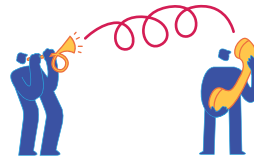

THE WORKPLACE OF TOMORROW HAS EVOLVED INTO A FLUID SYSTEM.

IT'S HOW:

People **THINK**

Clarity begins with space that inspires.

We **Connect**

Purpose is built through meaningful connection.

Everyone **PERFORMS**

Environments that adapt help people do their best.

—
“People now ask,
why should I come
to the office?”

At WoW, rigid boundaries are stripped to make way for fluid ecosystems that reflect how people think, connect and perform throughout the day.

You get to experience how spaces are designed for spontaneous collaboration, deep focus, learning and recovery.

AGILITY

THE NEW
WORKPLACE
CURRENCY

“

It's not about
moving furniture,
it's about designing
environments that
move with people”

That shift is already happening - and if your workplace hasn't caught up, you risk being left behind. Today's workday is no longer fixed. It moves between focus, collaboration, learning and pause. Offices that fail to support this rhythm will simply be bypassed.

COMFORT

PRODUCT

PERFORMANCE

**THE BEST
ENVIRONMENTS
BALANCE COMFORT
WITH CLARITY,
ENABLING PEOPLE
TO WORK
AT THEIR BEST.**

**DYNAMIC
BY DESIGN**

**PERFORMANCE
WITH WELLBEING**

**EVOLVING
WORKSPACES**

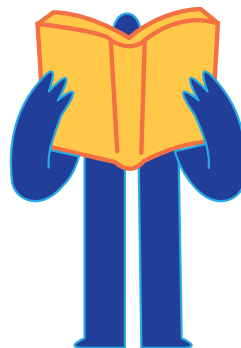

**FOCUS-DRIVEN
ENVIRONMENTS**

The workspace of tomorrow is witnessing a gradual shift towards a more human-centred environment, often described as a “softening of the workplace”.

This is an evolution beyond aesthetics, where the focus zeros in on performance through comfort. WoW introduces an office that draws from hospitality principles and prioritise ease, warmth and emotional comfort.

However, this does not com at the expense of efficiency. Instead, comfort is reframed as a driver of productivity.

KOKUYO

LET'S WORK.

IN THE CITY, WITH THE TEAM.

This is the lab where diverse values intermingle, constantly sparking new reactions.
Introducing the "Work & Life Freedom Hub" open to the entire city.

1

A HUB FOR NEW IDEAS

KOKUYO believes the modern office should be more than just a place to work; it should be an **"open arena"** for everyone. The goal of **THE CAMPUS** is to expand experiences beyond daily tasks and create a hub where new **"knowledge"** for the future is born. By focusing on long-term social challenges, **KOKUYO** uses this facility as a **"living laboratory"** to experiment with and design the future of work.

2

To achieve this vision, **THE CAMPUS** focuses on three key areas:

The Three Strategic Concepts

A "Live Office"

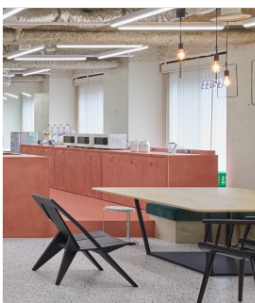

Testing Next-Generation Workstyles To discover what the future office needs, **KOKUYO** employees lead by example. They actively practice and test advanced ways of working within their own office. By treating the workspace as a **"live exhibition,"** **KOKUYO** provides real-world insights into how spatial design can improve productivity and well-being.

A "Space Open to the City"

Connecting with the Community To create a rich and diverse environment, **THE CAMPUS** is open to the public. By making parts of the building accessible to everyone, **KOKUYO** transforms a private corporate office into an inclusive landmark. This integration with the city encourages people to meet and share ideas, creating a sense of shared prosperity.

"Open Innovation"

Solving Social Issues Together **KOKUYO** aims to expand its business and solve social problems by working with outsiders. Through events and joint product development, **THE CAMPUS** promotes **"co-creation"** with other companies and universities. By breaking down organizational walls, it serves as a platform for innovation that one company could not achieve alone.

Discover Fetch Acoustic:

Innovative Design Modular Panel

Fetch Acoustic X Burgeree specializing in the research, development, and production of PET architectural acoustic materials, as well as providing professional acoustic solutions. Our products are breathable, fire-retardant and heat-insulation and have a strong durability in any environment. The light weight and easy installation method can be easily contacted by anyone, choose a variety of colour swatches at a reasonable price with no minimum order quantity and lead time can freely decorate the interior. Not only that, but it can be reused because it is composed of harmless substances. After a long period of research and development, We have introduced excellent durable products that are both practical and environmentally friendly.

We create recyclable products by using recycled materials to reduce carbon emissions, to be carbon neutral, increase technology investment, enhance product and service innovation, continue to expand market share, build a healthy life as the core concept, to build the most valuable enterprise in the domestic acoustic materials industry. We have established a unique recycling process that enables waste materials to be recycled into new products.

1

Great Acoustic Performance

PET Felt's porous structure effectively absorbs and diffuses sound waves, helping to reduce noise, echo, and reverberation. It enhances acoustic comfort in spaces like offices, classrooms, and public venues.

2

Long-Lasting and Low Maintenance

PET Felt is highly resilient and resistant to wear, maintaining its shape and performance over time, even in busy environments. It is easy to clean and requires minimal upkeep, making it a reliable option for various applications.

3

Design Flexibility

PET Felt is highly adaptable, offering a wide range of colours, textures, and shapes. The material is easy to reshape, cut, and mount, allowing for creative and custom designs that fit diverse interior needs.

4

Sustainability

Made from recycled plastic bottles, PET Felt reduces waste and contributes to environmentally conscious building practices. It can also be recycled again after use, extending its lifecycle and reducing its environmental impact.

Let our Quality do the Talking...

REDEFINING MODERN COMFORT

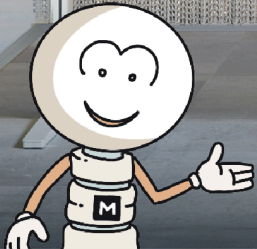

Designed by Kosuke Tokui, the Qore Chair reflects Benithem's modern approach to office seating. Inspired by the iconic Zoom Chair, Qore features smooth concave surfaces and soft curves that create a clean and refined appearance.

Its minimal design brings harmony to modern workspaces while maintaining comfort and functionality. The chair combines sporty lines with soft outlines, making it suitable for offices, meeting spaces, and home offices.

Qore also demonstrates Benithem's commitment to quality craftsmanship. The unique concave frame design requires high precision in the molding process, resulting in a smooth and elegant finish. Functional details such as the lumbar support and intuitive adjustment controls are carefully integrated into the overall design.

With its balance of comfort, simplicity, and contemporary aesthetics, the Qore Chair represents a new generation of workspace seating.

MARKANT

It's About The Way You Work.

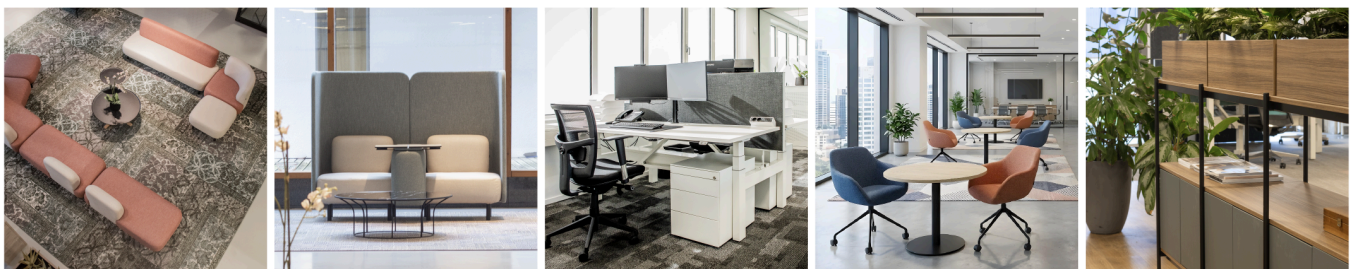

Workplaces Designed for What Matters

Health • Productivity • Sustainability

Today's workplaces need to do more than function. They need to support healthier people, better performance, and more sustainable ways of working. At Markant, we design workplace ecosystems that bring these priorities together — from ergonomic workstations and collaborative spaces to acoustic focus zones and adaptable breakout environments.

Because when people feel better, they work better.

Featuring: Max • Matrix • Meetup! Table • Imagin • City Collection • Workways storage & divider systems

A Living Workplace Ecosystem

This year, we're also collaborating with BerryGood to showcase a workplace where work and nature coexist.

Featuring a live strawberry incubator integrated into the workspace, the installation explores how healthier environments can support wellbeing beyond ergonomics — bringing nature, focus, and fresh produce into everyday work settings.

Silence is a Productive Tool

The modern office was built on an idea: that proximity breeds collaboration. Open floors, shared tables, and fluid spaces were meant to dissolve hierarchy and spark conversation. And they did – sometimes too well. Today, the greatest challenge isn't getting people to talk. It's giving them somewhere quiet to think. Enter the acoustic workspace pod – a compact, self-contained environment that sits within an open floor plan and delivers something increasingly rare in the modern office: genuine acoustic privacy, on demand.

"Not just a pod. A considered response to how people actually work – alone, in pairs, and in small focused groups."

01 – Focus

Deep Work, Undisturbed

Sealed acoustics let you concentrate fully – ideal for calls, writing, and analysis without office noise bleeding in.

03 – Wellbeing

A Space to Reset

A quiet enclosure helps people recharge rather than push through sensory overload and cognitive fatigue.

02 – Collaboration

Private Meetings, Open Office

Seats two to four for client calls or sensitive conversations – no conference room booking required.

04 – Real Estate

Flexibility Without Fitout

Non-permanent and relocatable – no permits needed. Reconfigure as your team grows or your space changes.

Ready to Experience it in Your Space?

Visit us at WOW booth or request a Free consultation.

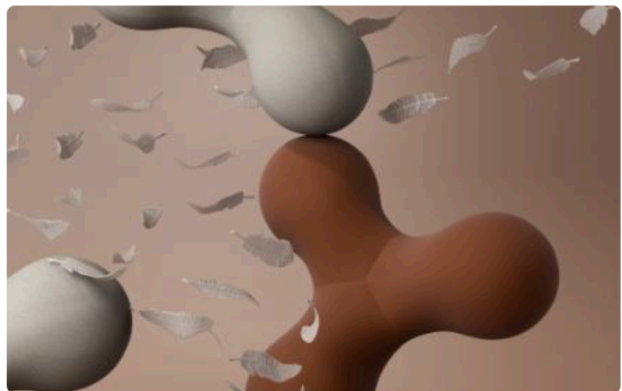

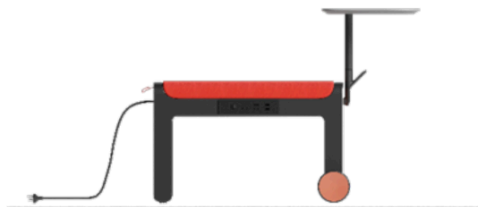

Our team can advise on pod selection, placement, and delivery timelines.
